The high-throughput solution for secure anti-tailgating

In areas of high traffic, how to be sure that an unauthorized user does not gain access by following an authorized user?

SMACS multi-entry is the secure and reliable solution against tailgating where there is a high volume of throughput traffic. Designed to seamlessly integrate into your infrastructure, it prevents tailgating whilst still catering for a high throughput. SMACS multi-entry ensures that your security processes are followed correctly at every transit and that they are adapted to your business requirements.
SMACS multi-entry is the secure solution to prevent tailgating whilst allowing for a high frequency of passage. Typical applications include securing the access to headquarters, employee entrances, VIPs rooms or conference rooms.

Part of the SMACS product line, SMACS multi-entry is the reliable solution for automatic, secure anti-tailgating in high throughput areas. SMACS multi-entry is installed in a 2-doors airlock and provides secure anti-tailgating where there is the need to have numerous users accessing the secured area in a single transit. It is suited to a wide range of applications and may be easily retrofitted into the existing infrastructure.

SMACS multi-entry provides secure anti-tailgating whilst allowing for flexible security processes to meet the individual needs of your business. For example, in parallel to secure anti-tailgating, SMACS multi-entry can allow for levels of security that vary accordingly to night and day, or define, as a parameter, the maximum number of users allowed to transit in parallel to the secured area after having been identified. SMACS multi-entry is a Swiss-made solution that can either be a standalone system or seamlessly integrate with any existing access control system.

### Specific features of the product

**SMACS multi-entry key performances in anti-tailgating**
- ✔ Fully automatic security
- ✔ Passage of up to 20 persons/minute
- ✔ Number of people in a single transit is up to 6 (can be changed)

**Possible optional security processes to anti-tailgating**
- ✔ Symmetrical/asymmetrical access control - control in one or both directions
- ✔ “day” mode versus “night” mode
- ✔ “week-day” mode versus “weekend-day” mode
- ✔ Visitor management

### Notices:
- SMACS products are reliable and have high performances
  - Fully automatic and intelligent anti-tailgating, whilst allowing for user comfort
  - Patented and Swiss made
  - No mechanical elements to impede people movement
  - Reduced Total Cost of Ownership (TCO)
  - Integrable with any type of access control system and any door control
  - Used by many Fortune Global 500 companies around the world
  - Compatible with the security standards in many industries

### SMACS products are flexible and adapt to your business needs
- Flexible security processes that meet your specific needs
- Audio/visual guidance for user comfort
- Retrofit is possible as it adapts to existing infrastructure
- Transformation of any room/ corridor into a secured unmanned airlock
- Adaptation to very different environments (including stairways)
- Possibility of wide airlocks with very different shapes
- Minimal impact on architectural aesthetics
- Easy to uninstall and reposition in case of change to the infrastructure
- Many product and service options available
