The secure anti-tailgating solution for lifts

With elevator giving access to secure areas, how to be sure that an unauthorized user does not gain access by following an authorized user?

SMACS lift is the secure and reliable solution against tailgating for elevators, maintaining secure access to restricted floors from a public space. Designed to seamlessly integrate into your infrastructure, it prevents tailgating via an elevator. SMACS lift ensures that your security processes are followed correctly at every transit and that they are adapted to your business requirements.
SMACS lift
The secure anti-tailing solution for lifts

SMACS lift is the secure solution to prevent tailgating through an elevator providing access to a secure floor. Typical applications include securing the access to elevators in headquarters, administrative buildings, data centers, VIPs floors or command & control rooms.

Part of the SMACS product line, SMACS lift is the reliable solution for automatic, secure anti-tailing for an elevator providing access to secure floors from a public floor. SMACS lift is installed at the elevator cabin and provides secure anti-tailing. More than one user can take the lift as long as they all have correct access rights. It is suited to a wide range of applications and may be easily retrofitted into the existing elevator infrastructure.

SMACS lift provides secure anti-tailing for elevator whilst allowing for flexible security processes that meet the individual needs of your business. For example, in parallel to secure anti-tailing, SMACS lift can allow for visitor management or define, as a parameter, the maximum number of people allowed to have access simultaneously to the secure floors.

SMACS lift is a Swiss-made solution that can either be a standalone system or seamlessly integrate with any existing access control system.

### Specific features of the product

#### SMACS lift key performances in anti-tailing

- ✔ Fully automatic security
- ✔ Specially designed to integrate with elevator infrastructure
- ✔ Number of people in a single transit is up to 6 (can be changed)

#### Possible optional security processes to anti-tailing

- ✔ “day” mode versus “night” mode
- ✔ “week-day” mode versus “weekend-day” mode
- ✔ Visitor management
